I get the dataset from **kaggle**

LINK:

https://www.kaggle.com/ak47bluestack/amazonphonedataset?select=amazon_phone_dataset.csv

The datasets consists of 9595 lines

This datasets has information about the mobile phones which are present on the amazon.

From this date we get information about phones, we know new phones, we know the prices, we know their ratings

And we can do different practices with this dataset. Because the date is beautiful and big.

These are def of columns

Product_name: Title of product

by_info: Company name

Product_url: URL of product from amazon

Product_img: URL of image

Product_price: Price of product in INR

rating: 5 star rating

total_review: Customer review number

ans_ask: Customer asked for the answer

prod_des: Short description of product

feature: complete description of product and its features

cust_review: review of the customer
